Remote Doctor Consultation

For Remote doctor consultation, I create a website for fixing appointment for the doctor.

In this totally I create 6 webpages First home page is containing navigation bar for different webpage like for appointment, gallery about doctors, registration form for doctors to enroll them in this website, login form for hospital and pharmacy. And this page contains table contains details about the doctors and available time and all.

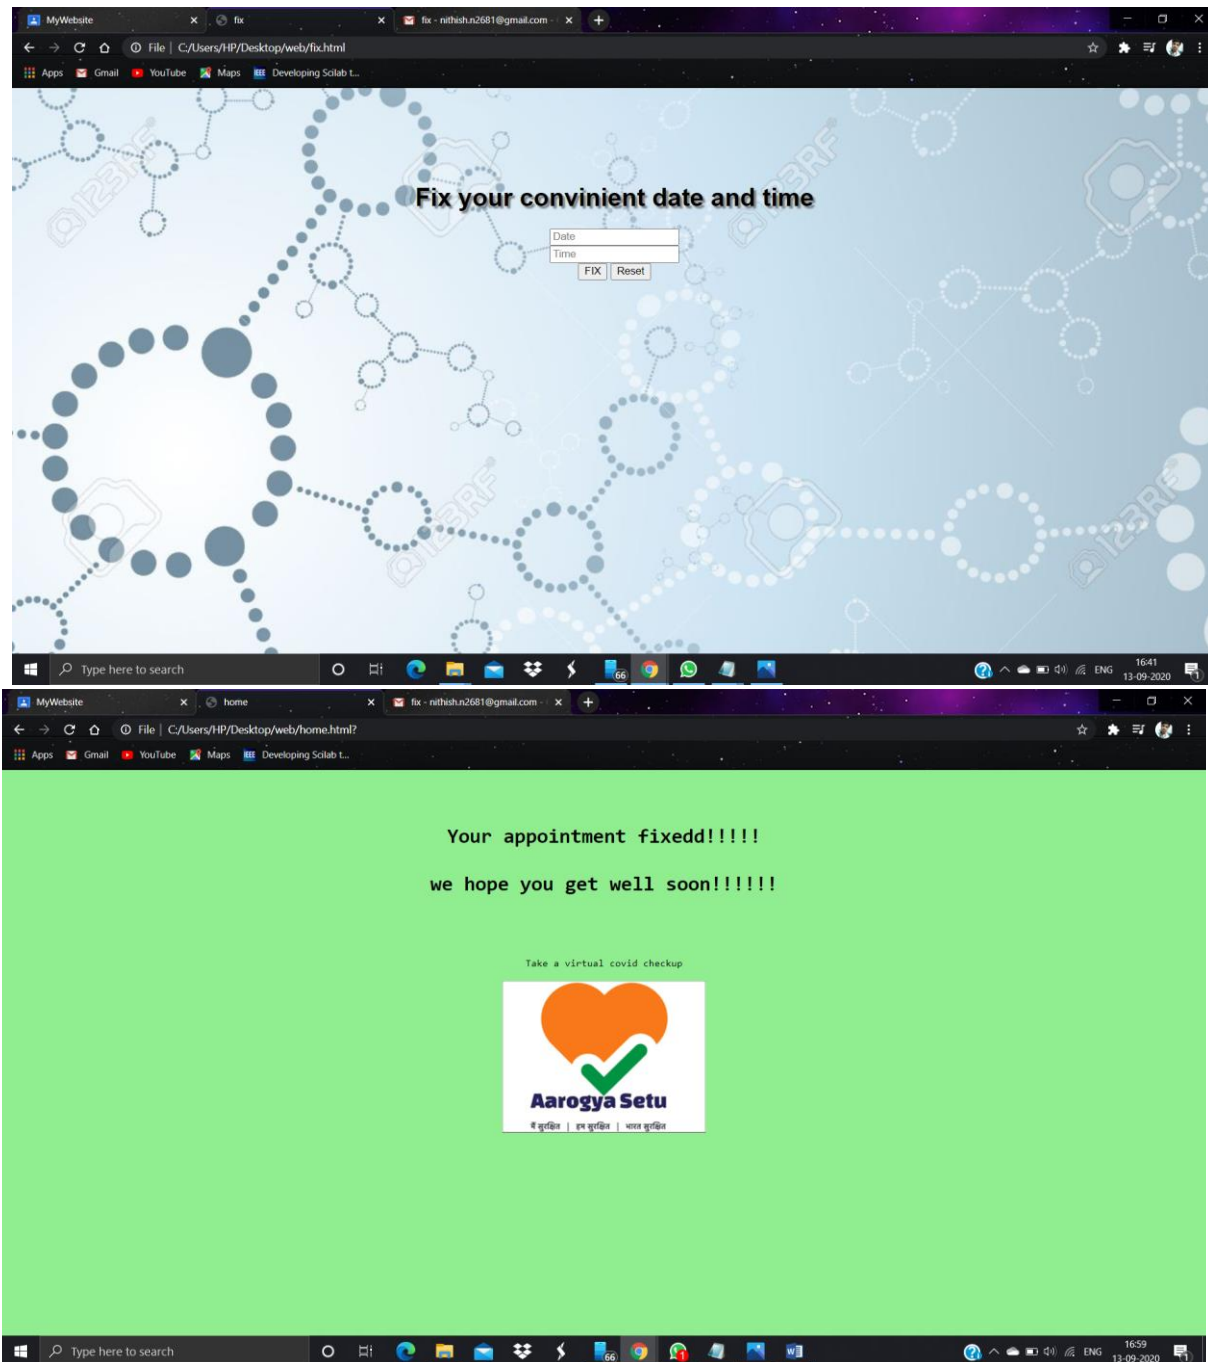

Here, the home page named as home.html

Appointment

This pages is named as appt.html

Here I use form for getting date and time and use placeholder instead of label, Specially I use Required attribute for indicating necessary field. Then Reset button use to clear section and direct this page to another page there I use image as link for covid chekup.

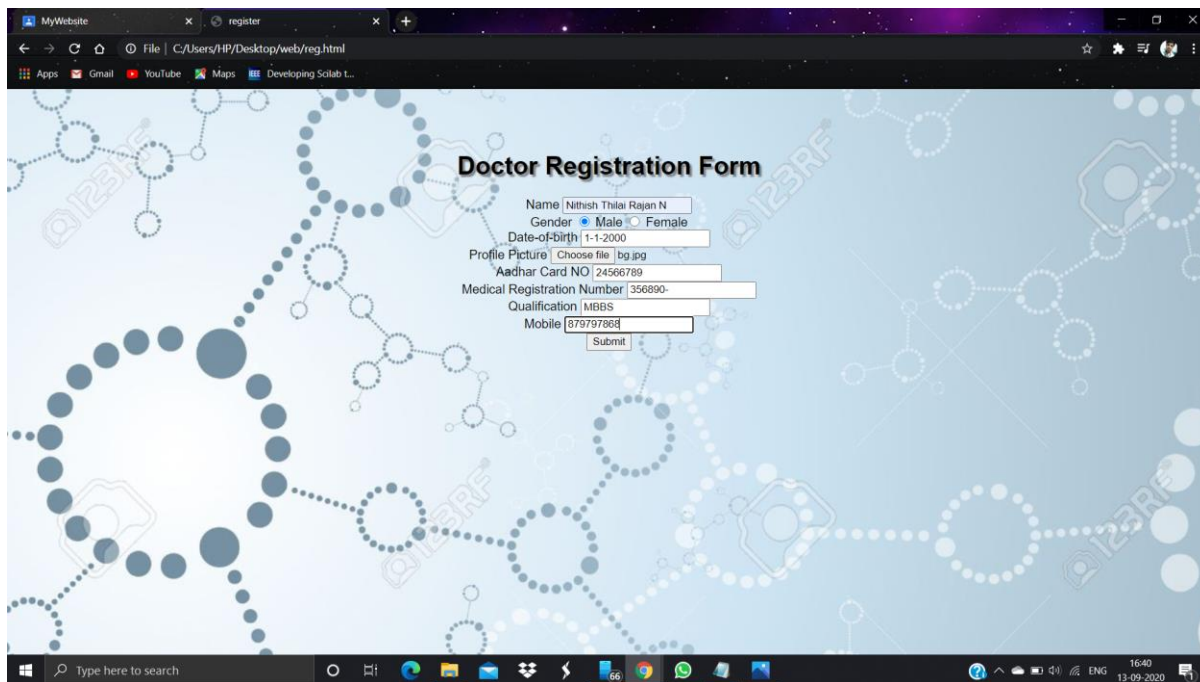

Then u click image you direct to arogya setu official page for virtual covid chekup, File named as covidchekup.html

Then back to home and go to doctor registration

Doctor Registration

This file is named as reg.html

I use form to get details especially name picture for profile and etc...

The screenshot displays a web browser window with a single tab titled 'register'. The address bar shows the file path 'C:/Users/HP/Desktop/web/reg.html'. The webpage has a light blue background with a decorative pattern of circles and lines. The form is titled 'Doctor Registration Form' and contains the following fields and controls:

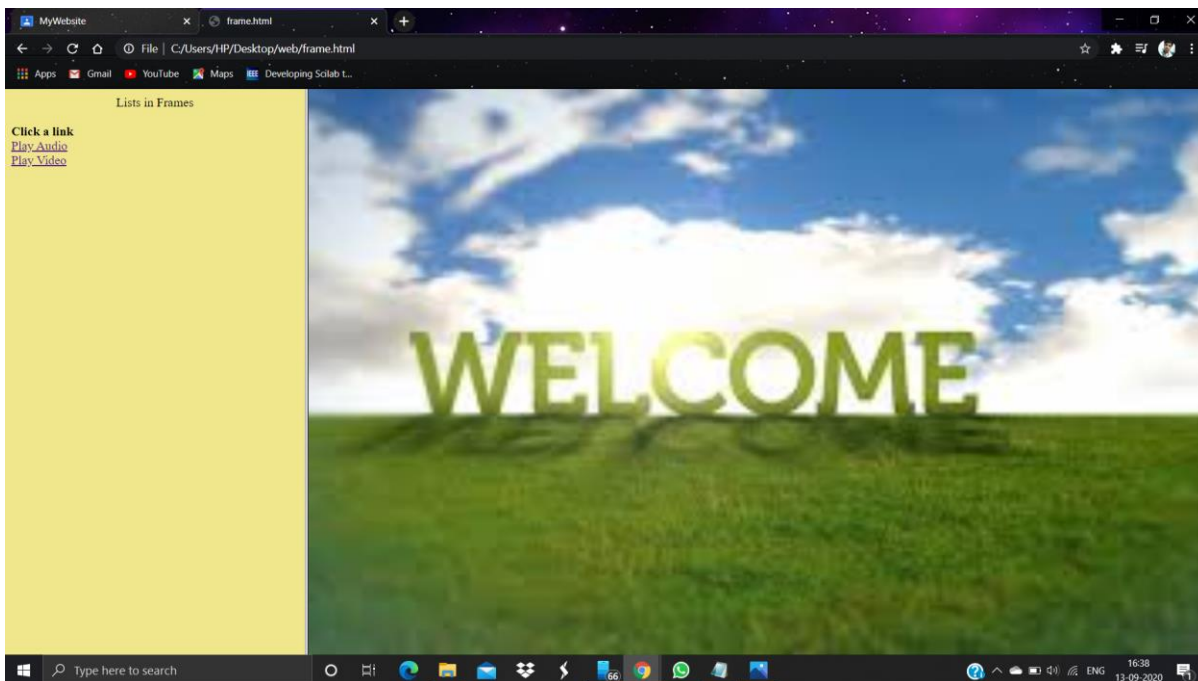

- Name:
- Gender: ☒ Male ☐ Female
- Date-of-birth:
- Profile Picture:
- Aadhar Card NO:
- Medical Registration Number:
- Qualification:
- Mobile:
-

The Windows taskbar at the bottom shows the search bar, task view button, and several application icons. The system clock indicates the time is 16:49 on 13-09-2020.

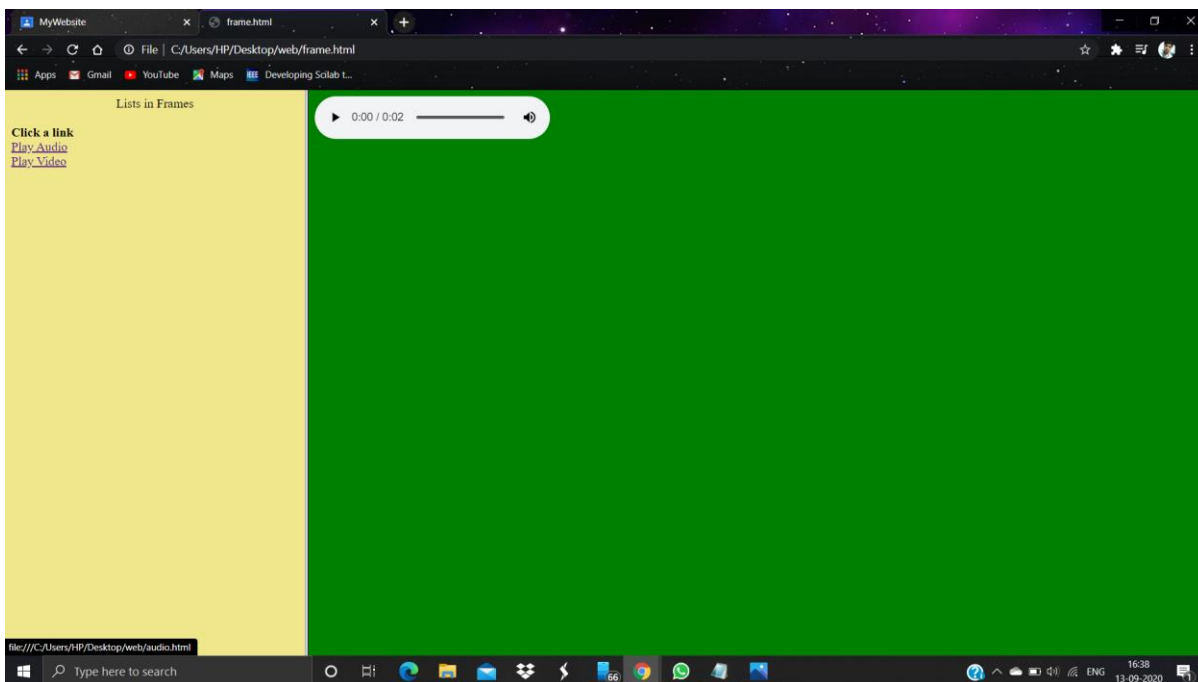

Gallery

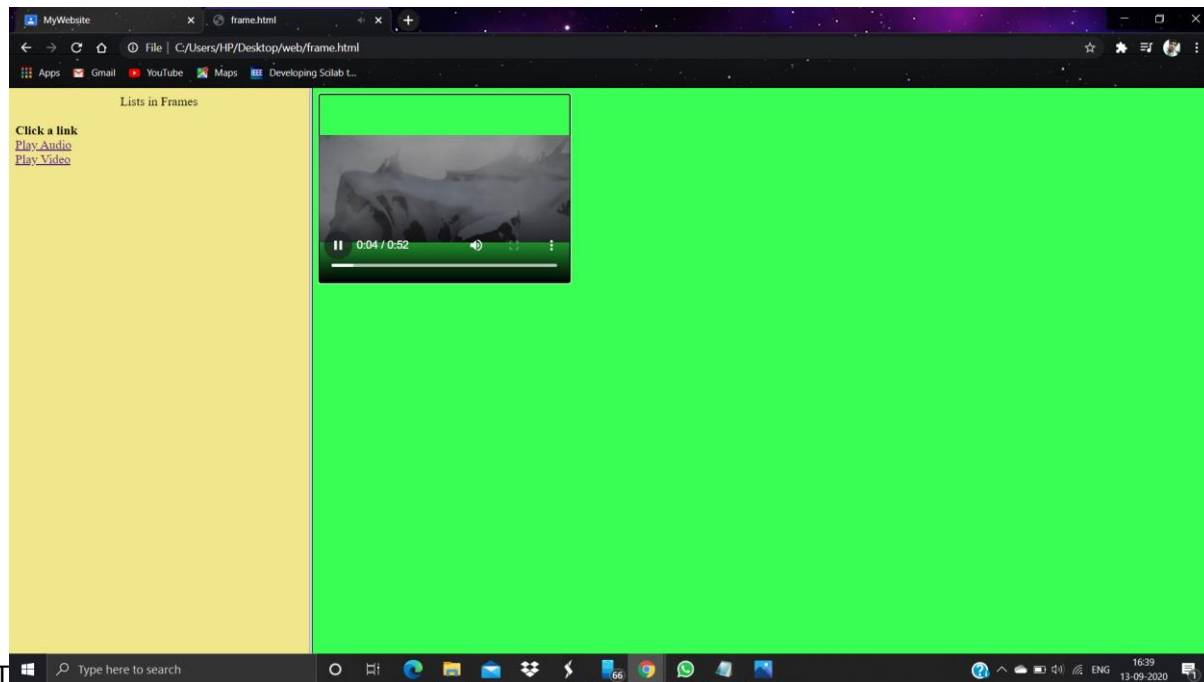

Then back to home and goes to gallery named frame.html

there I use frames there I divide into two frames for audio and video

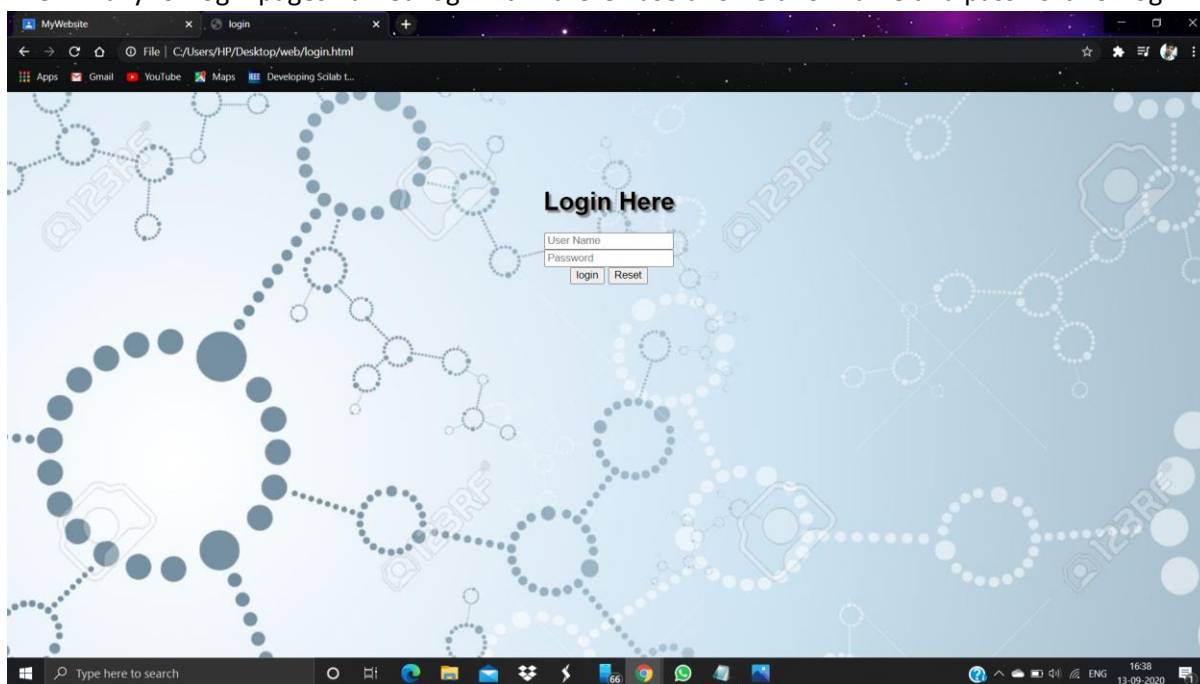

Then click the audio and video for respective pages

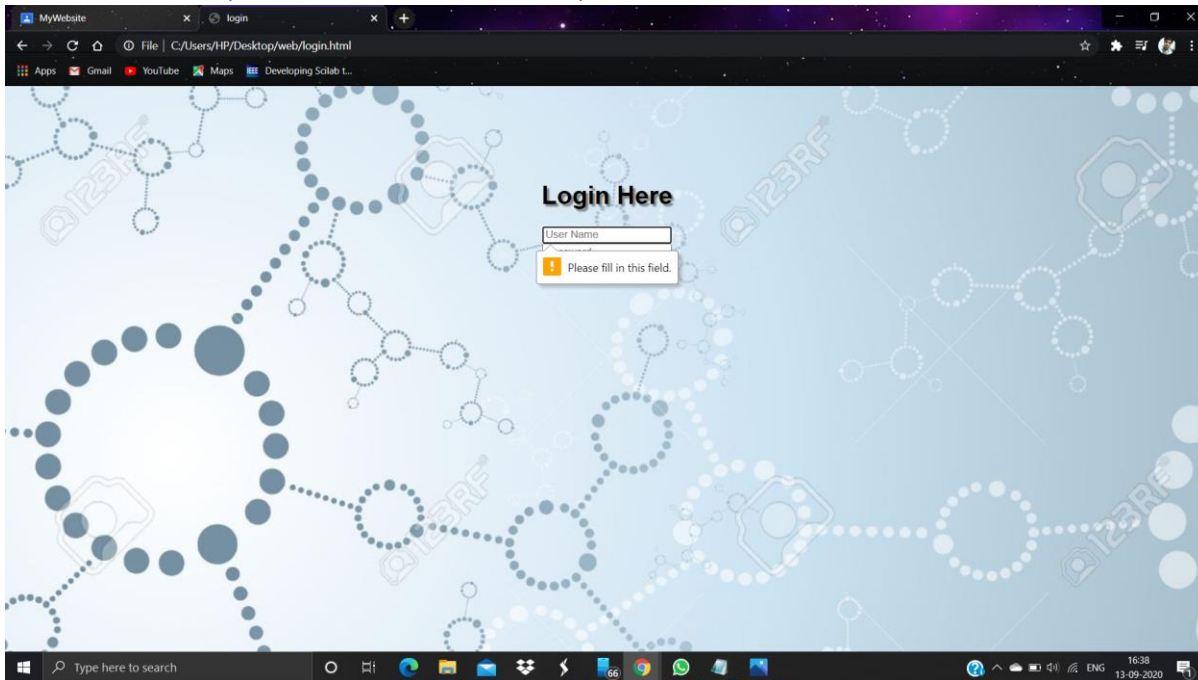

Login

Then finally for login pages named login.html there I use two field for name and password for login

Here too I use required attribute for mandatory details,

And this is detailed report of my website

Thank You!!!
